

Delivering premium results for Australian growers

Commencing operations in 2004, Emerald has grown rapidly to become one of Australia's leading independent marketing companies in the multi-billion dollar grain market.

This growth has been founded on Emerald's core values of integrity, commitment and innovation, and is driven by a passion to work directly with growers, and grower organisations, in all major farming regions across the country.

Experience makes a big difference

Our highly experienced and dedicated pool managers are recognised as leaders in their profession. Expertise in both domestic and international commodities and futures markets, combined with our ongoing role as advisors to agribusiness around the country, helps ensure that our team continues to deliver competitive returns and innovative solutions for our customers.

Access to the world

Our rapid growth has not been limited to Australian shores. In recent years, Emerald has been recognised internationally as a provider of choice, and in early 2010, this was confirmed when Japanese giant, Sumitomo Corporation, welcomed us on board as a joint strategic partner.

This Sumitomo investment has provided Emerald's grower customers with unrivalled access to the premium Japanese market, as well as many other key markets where Sumitomo has investments. On a corporate level, this relationship has allowed us to accelerate growth and extend our range of services.

Most importantly though, it has provided us with the opportunity to focus closely on what we do best – work with growers and grower organisations to provide innovative products and ultimately better results for our ever-growing customer base.
